Sequence 2556, Application US/08584040

Patent No. 6346398

GENERAL INFORMATION:

APPLICANT: Pavco, Pamela

APPLICANT: Brichcomb, Dan T.

APPLICANT: Stinchcomb, Dan T.

APPLICANT: Escobedo, Jaime

TITLE OF INVENTION: TREATMENT OF DISEASES OR

TITLE OF INVENTION: TREATMENT OF DISEASES OR

TITLE OF INVENTION: QUANTIONS RELATED TO LEVELS

TITLE OF INVENTION: QRACTIAR ENDOTHELIAL

TITLE OF INVENTION: GROWTH FACTOR

NUMBER OF SEQUENCES: 8502
                                                                                 TITLE OF INVENTION: METHOD AND REAGENT FOR THE TITLE OF INVENTION: TREATMENT OF DISEASES OR TITLE OF INVENTION: TREATMENT OF DISEASES OR TITLE OF INVENTION: COMDITIONS RELATED TO LEVELS TITLE OF INVENTION: GROWTH FACTOR NUMBER OF SEQUENCES: 8502

Sequence 3050, Application US/09371772B

Secuence 3050, Applications:
APPLICANT: Raiozyme Pharmaceuticals, Inc.
APPLICANT: Bacobedo, Dan
APPLICANT: Bacobedo, Jaime

APPLICANT: Bacobedo, Jaime

TITLE OF INVENTION: Method and Reagent for the Treatment of Diseases or Conditions Re

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor

FILE REFERENCE: MBHB00,876-07 (237/198)

CURRENT APPLICATION NUMBER: US 60/005,974

PRIOR FILING DATE: 1996-01-08

NUMBER OF SEQ ID NOS: 14225

SEQ ID NOS: 14225

SEQ ID NOS: 14225

SEQ ID NOS: 3050

Sequence 3608, Application US/09371772B

Sequence 3608, Application:

APPLICANT: Ribozyme Pharmaceuticals, Inc.

APPLICANT: Bacobaco, Dam

APPLICANT: Bacobaco, Dam

APPLICANT: Becobaco, Jaime

TITLE OF INVENTION: Method and Reagent for the Treatment of Diseases or Conditions Re

TITLE OF INVENTION: Method and Reagent for the Treatment of Diseases or Conditions Re

TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor

FILE PERENCE: MBH800,876-J (237/198)

CURRENT APPLICATION NUMBER: US/09/371,772B

CURRENT APPLICATION NUMBER: US 60/005,974

PRIOR APPLICATION NUMBER: US 88/584,040

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ·.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 3, Application US/08214603
; Patent No. 5596091
; GARRAL INFORMATION:
GARREAL INFORMATION:
TITLE OF INVENTION: NOVEL ANTISENSE OLIGONUCLEOTIDES; TITLE OF SEQUENCES: 13
CORRESPONDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend Khourie and Crew STREET: Steuart Street Tower, One Market Plaza
CITY: San Francisco
STATE: California
COUNTRY: US
                                                    US-08-214-603-2/C

1 Sequence 2, Application.US/08214603

1 Patent No. 5596091

2 GENERAL INFORMATION:

APPLICANT: SWITZER, Christopher

1 TILE OF INVENTION:

ADDRESSEE: Townsend and Townsend Khourie and Crew

STREE: Caleart Street Tower, One Market Plaza

CORRESPONDENCE ADDRESS:

ADDRESSEE: Townsend and Townsend Khourie and Crew

STREE: california

CONTYY: San Francisco

STATE: California

COMPUTER: READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC Compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.30

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/214,603

FILING DATE: 18-MAA-1994

CLASSIFICATION NUMBER: 37,369

REGISTRATION NUMBER: 37,369

REGISTRATION NUMBER: 37,369

REGISTRATION NUMBER: 37,369

REGISTRATION NUMBER: 2307E-052100US

Sequence 1, Application US/08821205

Patent No. 2866700

GBNERAL INFORMATION:

APPLICANT: Pfleiderer, Wolfgang
APPLICANT: Schnell, Ralf

APPLICANT: ABRYBIAK, Stephan

TITLE OF INVENTION: Oligoribonucleotides.

CORRESPONDENCE ADDRESS:

ADDRESSE: Finnegan, Henderson, Farabow, Garrett & ADDRESSE: Finnegan, Henderson, Parabow, Garrett & STREET: 1300 I Street, N.W., Suite 700

STATE: D.C.

COUNTRY: USA

ZIP: 20005-331E

COMPUTER READABLE FORM:

MEDLUM TYPE: Floppy disk

MEDLUM TYPE: IBM PC compatible
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match 1.1%; Score 12; DB 1; Length 12; Best Local Similarity 100.0%; Pred. Sequence 18, Application US/09619103

Patent No. 6429300

Patent No. 6429300

GENERAL INPORATION:

APPLICANT: KHZZ, Markus

APPLICANT: Margner, Richard

TITLE OF INVENTION: Peptide Acceptor Ligation Methods

TILE REFERENCE: 50036/031002

CURRENT FILING DATE: 1000-07-19

PRIOR APPLICATION NUMBER: US/09/619,103

PRIOR APPLICATION NUMBER: 06/145,834

PRIOR APPLICATION NUMBER: 1999-07-27

NUMBER OF SEQ ID NOS: 26

SEQ ID NOS: 26

SEQ ID NO 18

LENGTH: 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       US-10-002-528-5; Sequence 5, Application US/10002528; Patent No. 6436676

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 19, Application US/08480994

Patent No. 5834248
GENERAL INFORMATION:
APPLICANT: FALE, DEAN A.
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE
TITLE OF INVENTION: TREATMENT AND DIAGNOSIS OF CARDIOVASCULAR DISEASE
NUMBER OF SEQUENCES: 38
CORRESPONDENCE ADDRESS:
ADDRESSED: PENNIE & EDMONDS
STREET: 1155 Avenue of the Americas
CITY: New York
COUNTRY: New York
COUNTRY: USA
ZIP: 10036-2711
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                       US-08-678-280-10/c

Sequence 10, Application US/08678280

Patent No. 5776683

GENERAL INFORMATION:
APPLICANT: SMITH, HELENE S.
APPLICANT: CHUN, LING-CHEN
ITILE OF INVENTION: TRAGETS FOR BREAST CANCER DIAGNOSIS AND
ITILE OF INVENTION: TREATMENT
ITILE OF INVENTION: TREATMENT
